

# Dual-Track Wall Mount Instructions

## Bracket Positions on the Track

1. Near the Drive Unit

2. Next to the Track Connector

3. Near the Idler

4. In between 2 Brackets, put additional Bracket every 2 to 3 feet is suggested.

## Dimensions & components of dual-track wall bracket

1. Draw a horizontal straight line with a pencil for the wall brackets to be mounted.
2. Pinpoint where each individual wall bracket will be mounted.
3. Mark with a pencil the 3 screw holes of each individual wall bracket.

4. Drill holes into the wall & then hammer all anchors for the screws into the wall.  
(anchors & screws are not provided with the package)
5. Attach & screw every individual L-shaped wall bracket onto the wall.

**Note** If the wall is not a drywall but it is concrete, wood, metal, or anything else, it might or might not need anchor and require different type of screws.  
Please consult with your contractor or local hardware store how to secure the wall brackets.

6. Affix ceiling bracket to the L-shaped wall bracket together with enclosed bolt & nut through its side hole. Then rotate & align each of the brackets at about 45° angle position.

Worm's-eye view

7. Affix the top channel of the curtain track to the 45° aligned ceiling brackets all at once. Then one by one rotate the ceiling brackets for 45° counterclockwise. After the track is fixed onto the brackets, secure each bracket with bolt & nut through its other side hole. Tighten the bolts & nuts on both side holes for all brackets.

### **IMPORTANT NOTE**

- 1) The joint in the middle of the track is very delicate, please handle with great care. Always hands support the joint during installation.
- 2) It is recommended that at least two people are needed for track installation
- 3) Make sure the Carrier travel smoothly alongside the whole Track before inserting the Motor.
